

Room Service

New Room Service Tray by R&R Enterprises (800) 955-2259

DID YOU KNOW?

The average hospital can save approximately \$100,000 in food & supply costs per 100 beds by going to room service. This savings can be used to pay for any additional FTE's that might be needed to implement room service.

WHY ENGAGE A CONSULTANT WHEN DESIGNING AND IMPLEMENTING ROOM SERVICE?

- 1) For the same reason most people don't try to build their own homes.
- 2) As a result of 20 years of staffing reductions, your team no longer has time to reinvent the wheel.
- 3) To properly plan, design, & implement room service it takes approximately 750 to 1500 man hours between your team & your consultant.
- 4) The hospital uses consultants for all their other projects. Why should food service be any different?
- 5) Implementing room service is like opening a new restaurant.
- 6) When attempting to copy another hospital's room service program, how do you know that what they have developed is ideal?
- 7) Some of the self developed room service systems we have observed are less than ideal.
